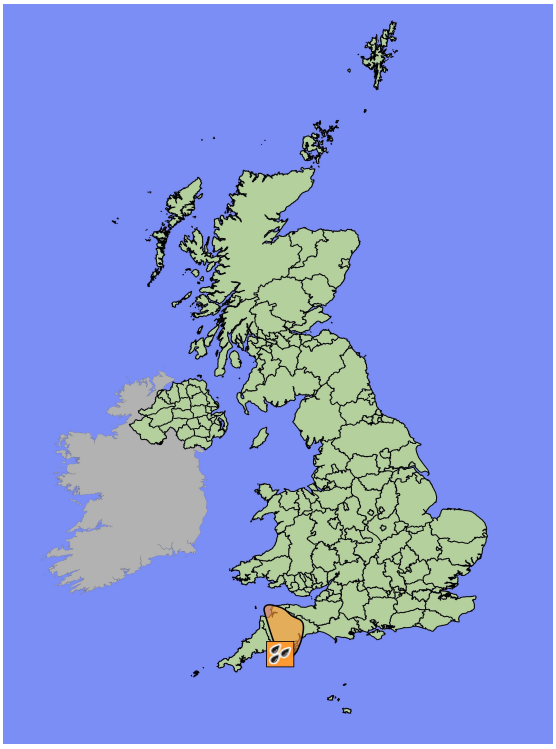
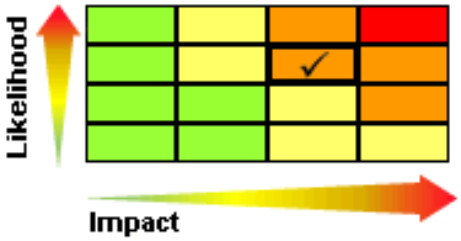
National Severe Weather Warning Service





Chief Forecasters Assessment
A very deep area of low pressure will pass just to the north of the UK on Tuesday and overnight into Wednesday, bringing a spell of wet and windy weather. The heaviest and most persistent rain is expected to be over southwest England. Accumulations of 20 to 30 mm are expected quite widely, especially over higher ground, with locally in excess of 50 mm over some hills. The heavy rain will also be accompanied by strong winds which could reach gale force around exposed coasts and over hills and moors.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **00:05 on Tue, 29th Jan 2013** until **06:00 on Wed, 30th Jan 2013**

Further rain will continue to spread northeastwards across South West England today, heavy and persistent in places before easing for a time this afternoon. Further heavy rainfall is then expected this evening and overnight before finally clearing on Wednesday morning. Given saturated ground, the public should be prepared for further localised flooding and disruption to travel, particularly in parts of Devon.

This is a further update to the warning issued on Sunday morning.
